2023/05/09 | Postpaid Query issue

Investigation Details:

Rule Name:user_postpaid_limit

Pi Table Name: cdo_lending_limit_v2

Rule Function: Blocks transactions if they fulfill these conditions.

- If it is a postpaid transaction
- if the postpaid account was activated in the last 24 hours
- if per transaction amount is greater than 2000 rupees or the cumulative amount is greater than the set limit based on their overall limit

For Additional details on the rule logic : https://jira.mypaytm.com/browse/RISE-607

How did the transaction bypass the rule

- All the transactions that got bypassed was the first transaction done by a postpaid user as soon as he/she activated his/her account with Paytm Postpaid
- Rule checks using the data present in the attribute to determine the time of activation and the approved limit.
- The user had activated his/her account thirty minutes back, but the Pi Table did not have those information yet.
- If this rule doesn't have sufficient information then the rule does not block the transaction

Result: Below users were able to bypass due to the delay.

customer	Account I	Account_modification_	Amou	Transaction date	2k/5k limit bre
267215558	8000	24-04-2023 01:18:44	7677	24-04-2023 01:28:56	Yes
303092442	39000	23-04-2023 00:57:57	8000	23-04-2023 01:19:16	Yes
356167636	38000	24-04-2023 01:24:29	38000	24-04-2023 01:49:05	Yes
1275134510	40000	23-04-2023 01:55:45	6000	23-04-2023 02:01:40	Yes
1285037434	12000	24-04-2023 03:24:03	12000	24-04-2023 03:31:10	Yes
1461250849	18000	23-04-2023 00:54:43	18000	23-04-2023 01:00:39	Yes

Action Item: M* team to analyze, if the delay was on Cassandra end. For more details on the request : https://paytm.slack.com/archives/C019JNJH18B/p1683304367619879

Conclusion : It was identified from the logs that M* received the activation event data from LMS team with a delay.
